Professional Summary

Systems-focused Software Engineer with a professional engineering foundation and expertise in full-stack development within the .NET/Angular ecosystem. Dedicated to architectural pragmatism and automation, with a proven ability to lead technical modernisations that eliminate manual toil and drive significant operational cost reductions. I thrive on the communication component of engineering, partnering closely with stakeholders to intricately understand their goals and ensure the delivery of customer-focused features that optimise delivery efficiency. Expert at translating intricate business logic into resilient technical solutions while prioritising 'Living Documentation' for long-term system health.

Technical Skills

Backend: C# / .NET (6/8 & Framework 4), Entity Framework (Core & 6), RESTful APIs, Python, OpenAPI/Swagger, xUnit, NSubstitute.

Frontend: Angular (12–18), TypeScript, Javascript, RxJS, Angular Material (Material 3), CSS/SASS, Tailwind, Responsive Design.

Data/Messaging/Cloud : PostgreSQL, SQL Server, Docker, Google Cloud Platform (GCP), Azure (App Services) RabbitMQ, Azure Service Bus.

Testing & DevOps: Git, GitHub, Bitbucket, Github Actions (CI/CD), Microservices, Monoliths, Jira, Agile/Scrum, Kanban.

Professional Experience

Dye and Durham (London) – Software Engineer

March 2023 – Present

- Eliminated manual fulfillment for 25+ daily orders by re-architecting a legacy SOAP integration into a modern RESTful pipeline within a .NET Framework 4 environment; engineered an automated status-polling mechanism via Azure Service Bus to ingest and upload reports, removing all manual human intervention from the workflow.
- Modernized a large-scale monolithic UI by migrating from Angular 12 to 18 and incorporating the Material 3 design system, resulting in a 100% resolution of critical and high security vulnerabilities; refactored legacy code to remove unsupported node packages, ensuring long-term system maintainability and UI consistency.
- Engineered a scalable microservice architecture for a national property search API using .NET and an OpenAPI-first design; implemented RabbitMQ for asynchronous event messaging to decouple services and successfully standardize complex data schemas across multiple jurisdictions.
- Contributed to microservice-based and hybrid architectures, working across both greenfield services and legacy monolithic systems within property search and legal practice management domains.
- Built and supported CI/CD pipelines using GitHub Actions, including automated package publishing and mentored peer teams in improving build, test, and release workflows.
- Enhanced the developer experience by spearheading a shift to "Living Documentation"; migrated team knowledge from Confluence to Git-based Markdown, Mermaid workflow diagrams, and Postman collections to ensure documentation evolves in real-time with code commits.
- Drove delivery efficiency by reviewing and questioning design specifications with stakeholders to prevent unnecessary complexity; utilized high-level communication skills to simplify technical specs and reduce "scope creep" throughout the development lifecycle.
- Collaborated on a standalone timekeeping frontend microsite using Angular, backed by a .NET microservice exposing REST APIs designed documentation-first using OpenAPI, with data persisted in PostgreSQL, and engineered to integrate cleanly into an existing monolithic application.

Robert Bird Group (Brisbane) – Senior Structural Engineer

July 2016 - March 2023

- Developed a desktop application with python for engineers to automate data generation from tower crane structural analysis models, helping reduce time for the team to output presentable data by ~67% and saving the company ~£18,000 / year.
- Developed a plugin with a graphical coding tool that produces tower crane lifting capacity charts and radius plans for engineering drawings. This Automated end-to-end data output process, reducing manual drafting time by 50% and saving ~£25,000 per year.
- Led a team of ~10 engineers and drafters on the construction phases, sequencing and temporary retention works on the Woolloongabba Underground Station on Queensland's largest transport infrastructure project, the £3 billion Cross River Rail development.
- Managed and mentored a team of 5 engineers and drafters on tower crane installation service projects globally.

Education and Qualifications

2022	Software Engineering Immersive - General Assembly
2022	Chartered Professional Engineer of Australia (CPEng, MIEAust)
2012 – 2016	Bachelor of Engineering (Civil Extended Major) (Hons I) - The University of Queensland GPA 6.67 out of 7.0, earnings Honours Class I Dean's Commendation for Academic Excellence (GPA of ≥6.67 out of 7)

Other Interests/Hobbies

Snowboarding/Skiing, Cooking, Travelling, Pub Quiz, Hiking, Football, Basketball, Beach Volleyball, Golf, Tennis.
